

AI Group Project

STAR INC.

STAR

Problem: College students often struggle to stay organized, keep up with academic deadlines, and prepare for career opportunities. Current tools are scattered across different platforms, making it hard for students to manage their classes, events, and future plans all in one place. This leads to stress, missed opportunities, and lower academic performance.

AI Solution: Star uses an AI mentor that continuously learns from each student's inputs over time. As students interact with the app, logging their study patterns, academic struggles, career interests, learning style, and goals. The AI stores this information into organized "memory chunks" by category. This dynamic memory system allows the AI to personalize recommendations based on the student's real academic and career journey, not just static profiles.

The AI also actively scrapes relevant data from external platforms (like LinkedIn, university event pages, scholarship sites, etc.) to surface new, real-time opportunities without students needing to search across different apps. As students grow, the AI refines its suggestions for study resources, internships, events, scholarships, and even volunteer opportunities based on their current interests and needs.

Ultimately, the AI becomes a **personalized college life companion**, helping students not just with studying, but with navigating everything outside the classroom that shapes their success.

Target Market: College students. Education industry, public school systems, private schools, job preparation.

Roles:

CEO: Imanol Galvan

CTO: Oscar Mauricio Prieto

CMO: Brandon Guzman

CPO: Rosario Lara

Situation:

College students today face overwhelming amounts of information spread across different platforms, academic tasks, internships, events, scholarships, and have no single tool that truly adapts to their personal academic journey.

Task:

Create an AI-powered system that not only organizes a student's academic and career life, but learns from their habits, preferences, and goals to provide smart, evolving, real-time support, all in one app.

Action:

We developed an AI mentor that collects and organizes student inputs (learning styles, study struggles, career interests, academic progress) into structured categories. It continuously updates the student's profile based on new behavior. At the same time, the AI uses web scraping to pull real-time opportunities like internships, scholarships, and events from external platforms, centralizing everything inside the app. The AI

learns *how* each student grows and adjusts recommendations dynamically over time.

Result:

Students receive a fully personalized college experience: tailored study guidance, curated career opportunities, and real-time event updates without having to search across multiple platforms. The AI mentor grows with them, reducing stress, saving time, and helping them succeed academically and professionally.

The idea as of today April 28 //////////////////////////////////////

Final Project Guidelines

AI-Powered Software Developer Learning Pathway

Final Presentation Guidelines

Final presentations will take place on **Thursday May 8, 2025 from 6pm to 8pm**

Purpose

The final presentation is your team’s opportunity to highlight what you’ve learned throughout the course and demonstrate how you've applied your skills to solve a real-world problem using AI technologies.

Presentation Format

Each team will have **10 minutes** to deliver a presentation using a slide deck. Your presentation should address the following:

- **Problem Statement**
What real-world problem are you addressing?
- **AI-Powered Solution**
How does your product incorporate AI to solve this problem?
- **Competitive Landscape**
Who are your competitors, and how does your solution differ?
- **Target Market**
Who is your intended user or customer base?
- **Traction**
Have you validated your idea or built early momentum (e.g., user feedback, prototype testing, signups)?
- **Team Overview**
Who is on your team, and what unique strengths or skills does each member bring?
- **Next Steps**
What are your plans for developing or launching your product beyond the course?

Live Demo

Please include a brief product demonstration that showcases the core functionality of your AI-powered solution.

Q&A Session

Panelists and fellow participants will provide feedback and ask questions to help you reflect on your work and next steps.
